The Mountaineers Safety Committee Recommendations for 2013

Prepared by the Mountaineers Safety Committee:
Mindy Roberts – Chair

Helen Arntson – Seattle
Janine Burkhardt – Seattle Safety Officer
Peter Clitherow – Seattle
Brent Colvin – Everett
Suzy Diesen – Kitsap Safety Officer
Steve Glenn – Bellingham Safety Officer
Michael Hansen – Seattle
Richard Lambe – Foothills Safety Officer
Geoff Lawrence – Properties Safety Officer
Rich Leggett – Seattle
Amy Mann – Tacoma
Miriam Marcus-Smith – Seattle

Jim Nelson – Seattle
John Ohlson – Seattle
Chad Painter – Tacoma Safety Officer
Jeff Panza – Seattle
Tom Pearson – Olympia Safety Officer
Michael Radin – Everett
Dave Shema – Seattle
Michael Sweeney – Seattle
Tony Tsuboi – Everett
Mike Waiss – Tacoma
Jud Webb – Tacoma
Content and organization

• Mission of The Mountaineers Safety Committee

• Recommendations
  • All participants must communicate and participate within abilities
    – Leaders should cultivate an environment of engaging participants

• For more information – additional resources
The purpose of the Safety Committee is to promote a culture of safety among The Mountaineers.

• Collect and report incidents and near misses
  – Thank you for sharing experiences!
• Educate and train our leaders
  – How can we avoid incidents in the future?
• We volunteer our time because safety is fundamental to what we do
Thanks to leaders and participants for reporting incidents!

• Kudos for taking the time to record your observations – they are **valuable**
• All Mountaineers learn through reading incident reports
• We need more reports, please!
• Kudos for how leaders and participants responded to incidents – our training works.
1. Skills and training

- Ice axe arrest skills still show up most frequently in field trip incidents. Committees, instructors, and participants should recognize this and assess how to avoid incidents.
- Slips on snow show up most frequently overall. Committees should ensure snow travel instruction not just covers proper use of crampons and ice axe, but provides equal treatment in teaching courses – with crampons on and with ice axes. We don’t know of any slips on snow when crampons are worn.
1. Skills and training (cont’d)

• We need greater reporting on field trip incidents
• Ensure we teach water-centric first aid
• The Münter on Rappel can be configured to allow rope contact with the gate, unscrew the gate lock, and fail on rappel. Knowing that difference and having confidence in student uptake is what makes this an advanced skill. We advise climbers to exercise caution in using this in courses and treat this as an advanced skill, not a basic skill.
2A. Preparation for trips – leaders

- Watch for recurring destinations in the incident reports, like Guye Peak
- New leaders should be conservative in trip planning
- Leaders of programs including new participants should be conservative in trip planning
- Watch for overconfidence in newer participants
2A. Preparation for trips – leaders

• When setting an emergency time with your trip contacts, consider either late night or early morning, but not in the middle of the night. Overnight emergency times are hard to manage for contacts and for SAR.

• Consider greater use of "Leader Permission" for activities requiring greater than usual skill or conditioning.
2B. Preparation for trips – participants

- No trips or events are easy the way most people would define that. Don’t be lulled into thinking lower-grade activities are easy.
- Participants really need to do a thorough self-assessment of their own health issues. Personal illness and conditioning shows up frequently in incident reports.
- Lasik surgery could be a risk factor.
3. During trips

- Watch for compounding issues that elevate risk – recognize these and discuss as a group.
- Beware peer pressure to go anyway when conditions change or the goal changes.
- Participants and leaders should have the option of backing off. There will be other opportunities.
- The leader, but also each participant, should have veto authority. Majority-rules votes may not be ideal.
4. When incidents happen

- When treating injured participants, err on the side of caution.
- Splitting groups increases risk.
- If someone is sick or injured and the leader decides it is safe and appropriate to split the group, at least two people should attend the injured.
- If there is another qualified leader who is willing to lead the remaining trip participants, then the original leader can assist the sick/injured party and the trip can continue. If not, the trip should turn around.
5. After trips

• Don’t drive tired.

• In incident reports involving a slip on snow, leaders should indicate whether or not crampons were worn.

• Leaders please report anything that qualifies as a Major, Significant, or Minor incident or near miss.

• Call (206) 521-6030 right away for any major incidents – 911, emergency medicine, SAR

• Participants please participate in trip surveys.
Other recommendations

• Lodges and properties should consider AEDs; cost is about $1000 each

• Change pass/fail in the trip credit listing on member’s profiles to credit/no credit

Lessons from Mountaineer Incidents

Seattle Climbing and Seattle Safety committees are experimenting with raising awareness of safety issues that can arise on climbs, scrambles, backcountry skiing, and other Mountaineer activities. Previous Safety Highlights and other information are available on the Safety Committee’s web page.

Identifying information has been removed or disguised.

-- Dave Shema, Seattle Branch Safety Officer

Blows to the head can be very difficult to assess, especially in the backcountry. There may be few signs of injury.

Asking the right questions to learn of symptoms can be an art - head trauma patients may answer a specific question in the negative (e.g. “Did you see stars?”) and be too disorientated to address the intent of the question.

The student involved in this incident provided some suggestions.

-----

January 21, 2012 - east side of the Gold Creek Winter Recreation Area, Snoqualmie Pass
Injuries: head trauma with possible concussion
Cause of Accident: Snow/ice falling from tree
We are all responsible for safety

The Mountaineers Safety Committee
