

Everett Mountaineers Navigation Course Mountaineering Compass Requirements

The following features are REQUIRED on a compass for this course:

- 1) Clear rectangular base plate
- 2) Adjustable declination
- 3) Parallel orienting lines inside a rotating housing
- 4) Liquid filled, for damping
- 5) 360 degrees, marked in 2-degree (or less) increments.

Note: Be sure to avoid “quadrant” models that go from 0 to 90 degrees, four times.

Optional features:

- 1) Sighting mirror
- 2) Magnifying lens
- 3) Ruler(s)
- 4) Clinometer

Recommended models:

- 1) Suunto MC-2 Pro
- 2) Silva Ranger CL
- 3) Silva Ranger 75
- 4) K&R Sherpa
- 5) K&R Alpin

We cannot recommend the current offerings from Brunton. We have had many defects with several models and the “tool less” declination is problematic.

Be sure to keep your receipt, defects happen!
